Up to two-thirds of people with chronic urticaria have chronic spontaneous urticaria – a form of the condition that can occur unpredictably without an identifiable trigger1.

- Burning or stinging rash or hives
- Persistent itch
- Sudden and sometimes painful swelling in the deeper layers of the skin, often in the hands, feet, and face

Symptoms last for six weeks or more1,2:

- Persistent itch
- Swelling
- Burning or stinging rash or hives

Chronic urticaria gets in the way of living a normal life:

Symptoms last for six weeks or more1,2:

- Persistent itch
- Swelling
- Burning or stinging rash or hives

The devastating impact of chronic urticaria is more than skin deep3:

You might have a dreadful night’s sleep or suffer psychologically...

- Sleep difficulties, including insomnia
- Anxiety
- Depression

...almost twice as often as people without the condition.

...and have your life interrupted by visits to the doctor.

- Clinics (family doctor, allergist, dermatologist)
- Emergency rooms

...almost twice as often as people without the condition.

People with chronic urticaria report:

- Sleep difficulties, including insomnia
- Anxiety
- Depression

...almost twice as often as people without the condition.

People with chronic urticaria report:

- Swelling
- Burning or stinging rash or hives

...almost twice as often as people without the condition.

Go to your doctor and talk about your symptoms and what kind of help is available for you.

Dermatologists and allergists specialized in chronic urticaria can help you find a treatment that works for you.
